*Air Transport and Tourism: Interrelationship, Operations and Strategies* is a comprehensive textbook covering all major aspects of air transport from operational and managerial perspectives, as well as exploring the intricate relationship that exists between the air transport and tourism industries. The book introduces and provides in-depth coverage of the complexities of the airline industry and the tourism industry and the ways in which they are connected and impact on each other, for example, the destination–airport–airline nexus, and the roles of air transport and airlines in tourism and vice versa. Emphasis is placed on current and future trends, the impact of COVID-19, sustainability and environmental challenges throughout. Comprehensive coverage of airline operations, strategic management and planning, airport operations and air transport information technology is also provided, offering a practical viewpoint on these vital aspects of the subject. This will be the ideal introductory textbook for students of tourism and hospitality studying courses in aviation and air travel.

PMP® Exam: Practice Test and Study Guide, Ninth Edition uses self-study to help readers increase their chances of passing the PMP certification exam the first time. This spiral-bound edition includes 40 multiple-choice practice questions in each of the ten knowledge areas and in the professional and social responsibilities domain. It presents a 200-question practice test that simulates the actual PMP exam, fully referenced answers keyed to the five project management process groups, and a study matrix to help readers key in on areas that require further study.

This title provides a comprehensive overview of all aspects of the mechanical behavior of concrete, including such features as its elastoplasticity, its compressive and tensile strength, its behavior over time (including creep and shrinkage, cracking and fatigue) as well as modeling techniques and its response to various stimuli. As such, it will be required reading for anyone wishing to increase their knowledge in this area.

The book presents the work of the RILEM Technical Committee 249-ISC. Addressing the effective application of new recommendations for non-destructive in situ strength assessment of concrete, it provides information about the different steps of the investigation and processing of test results, until the delivery of strength estimates, and includes tables giving the minimum required number of cores in a variety of situations as well as several examples of how the recommendations can be used in practice. The book explores a topic which is of major importance, i.e. the assessment of concrete compressive strength in existing structures. This property (both mean and standard deviation) is a key input in many cases, such as the reinforcement of structures, the safety checking, the extension of service life. As the new RILEM recommendations imply a deep revision (and improvement) of field practice, the book is intended for managers of structures, structural engineers and specialists of NDT that have to answer these issues. More widely, it will benefit engineers and students who are interested in NDT and in the safety analysis of structures.

Whether you're caring for patients on the ground or in the air, Patient Transport: Principles & Practice, 5th Edition is an essential tool for your success in transport nursing. Developed by ASTNA, this trusted, one-of-a-kind resource has been extensively revised to keep you up-to-date with the latest technological advances, and help you meet the ever-changing needs of this critical nursing field. Comprehensive overviews familiarize you with the most common conditions and injuries encountered in practice, accompanied by important management considerations to help you ensure the most effective communication and the safest patient care in all transport settings. In addition, expanded content on bariatrics are featured throughout the book, along with 350 online questions and answers mapped to the CRFN/CTRN® exams. Expanded coverage of injuries commonly encountered in flight and ground nursing includes pathophysiology, assessment, planning, implementation, and evaluation discussions. Information based on the latest updates from the Federal Aviation Association and the National Transportation Safety Board alerts you to important safety regulations. Meets the needs of all healthcare providers dedicated to expert care delivery in transport, including paramedics, physicians, respiratory therapists, pilots, mechanics and communication specialist. Detailed coverage of management issues includes scene management, communication, safety, disaster management/triage, quality management, and marketing/public relations. NEW! Extensive revisions throughout text includes detailed objectives for every chapter, expanded content on bariatrics, and updates to chapters including Scene Operations and Safety, Neurologic Trauma, Patient Safety, and Shock. NEW! Real-life scenarios with updated technology demonstrate how to apply concepts to scenarios similar to those you'll encounter in practice. NEW! Focus on interprofessional and collaborative nature of transport, emphasizes the importance of teamwork in ensuring successful patient outcomes. NEW! Evolve site with 350 questions and answers mapped to the CRFN/CTRN® provide additional online preparation.

Energy Services Fundamentals and Financing, first volume of the Energy Services and Management series, provides a global view of energy services schemes and practices. The book discusses the role of energy services within the larger energy landscape and explores key technical aspects of energy systems for power, heating and cooling, including renewable energy systems and combined heat and power. The book analyzes energy efficiency in several electrical devices, such as motors, lighting and vehicles. It then examines actual energy services business models and policy, before presenting a quick reference section that includes key models and calculations. Provides an innovative approach to the fundamental aspects related with energy services, including technology implementation and financial schemes Discusses tools to measure process efficiency and sustainability in power and heating applications Includes case studies, models and calculations, both technical and financial, as well as downloadable data for simulation and modeling

François de Larrard is Scientific Director of the R&D centre of the LafargeHolcim group and Scientific Director of the French national project Recybéton. He formerly spent almost thirty years at IFSTTAR (formerly LCPC). He has been granted both the Robert l'Hermite medal and the G.H. Tattersall award by RILEM, and is author of two books, including Concrete Mixture-Proportioning which is also published by Taylor & Francis.

Offers a real-world, pragmatic guide designed to help emergency department managers efficiently which handle the many complex issues that arise in this challenging clinical environment. This title delivers practical solutions to virtually any problem that may arise in running an emergency department or acute care center.

The most thorough and up-to-date review available for the Certified Emergency Nurse Exam Emergency Nursing Certification is a complete step-by-step guide that thoroughly covers everything you need to know to pass the Certified Emergency Nurse (CEN®) examination.
