Understanding
Evolution

One piece of evidence offered by Darwin is found in the science of paleontology. Paleontology deals with locating, cataloging, and

Biology

interpreting the life forms that existed in past millennia. It is the study of fossils—the bones, shells, teeth, and other remains of organisms, or evidence of ancient organisms, that have survived over eons of time.

Paleontology supports the theory

Because lots of evidence supports scientific theories, they are usually accepted as true by a majority of scientists. Here's a brief summary of the evidence that supports the theory of evolution by natural selection:

Read Free

Biology

Biochemistry is the study of the basic chemistry and processes that occur in cells. The biochemistry of all living things on Earth is incredibly similar, showing that all of Earth's organisms share a common ancestry.
