Boiler Water Treatment Guidelines; Columbia Boiler Co

The treatment and conditioning of boiler feed water must satisfy three main objectives: Continuous heat exchange; Corrosion protection; Production of high quality steam; External treatment is the reduction or removal of impurities from water outside the boiler. In general, external treatment is used when the amount of one or more of the feed water impurities is too high to be tolerated by the boiler system in question.

Boiler water treatment is basically done to keep them free from scale and corrosion, enable continuous heat exchange, and produce and maintain high quality of steam. External water treatment can be done in many ways such as softening, deaeration, ion-exchange, evaporation, and chemical treatment .

Boiler Water Treatment Chemicals | Steam Boiler Treatment ...

After the softening process, some boiler feed water treatment systems will utilize dealkalization to reduce alkalinity/pH, an impurity in boiler feed water that can cause foaming, corrosion, and embrittlement. Sodium chloride dealkalization uses a strong anion exchange resin to replace bicarbonate, sulfate, and nitrate for chloride anions.
