Steven Forrest, author of the award-winning and critically-acclaimed "The Inner Sky", follows that work with this empowering look at choice-centred "predictive" astrology -- an astrology in which we predict the questions people face at certain times, but never the answers they will give! The astrologer here is not so much a prophet as a coach. You are never confined to an inescapable fate. Instead the planets offer you a whirling kaleidoscope of possibilities, with your freedom and the power of your imagination in the driver's seat.

Market forces are driving a radical restructuring of health care delivery in the United States. At the same time, more and more people are living comparatively long lives with a variety of severe chronic health conditions. Many such people are concerned about the trend toward the creation of managed care systems because their need for frequent, often complex, medical services conflicts with managed care's desires to contain costs. The fear is that people with serious chronic disorders will be excluded from or underserved by the integrated health care delivery networks now emerging. Responding to a request from the National Institute of Arthritis and Musculoskeletal and Skin Diseases, this book reflects the results of a workshop that focused on the following questions: Does the model of managed care or an integrated delivery system influence the types of interventions provided to patients with chronic conditions

and the clinical and health status outcomes resulting from those interventions? If so, are these effects quantitatively and clinically significant, as compared to the effects that other variables (e.g., income, education, ethnicity) have on patient outcomes? If the type of health care delivery system appears to be related to patient care and outcomes, can specific organizational, financial, or other variables be identified that account for the relationships? If not, what type of research should be pursued to provide the information needed about the relationship between types of health care systems and the processes and outcomes of care provided to people with serious chronic conditions?

From the international bestselling author of *Principles* and legendary investor Ray Dalio, who has spent half a century studying global markets, *The Changing World Order* examines history's most turbulent economic and political periods to reveal why the times ahead will likely be radically different from those we've experienced in our lifetimes. A few years ago, renowned investor Ray Dalio began noticing a confluence of political and economic conditions he hadn't encountered before in his fifty-year career. They included large debts and zero or near-zero interest rates in the world's three major reserve currencies; significant wealth, political and values divisions within countries; and emerging conflict between a rising world power (China) and the existing one (US). Seeking to explain the cause-effect relationships behind these conditions, he began a study of analogous historical times and discovered that such combinations of conditions were characteristic of periods of transition, such as the years between 1930 and 1945, in which wealth and power shifted in ways that reshaped the world order. Looking back across five hundred years of history and nine major empires - including the Dutch, the British and the American - *The Changing World Order* puts into perspective the cycles and forces that have driven the successes and failures of all the world's major countries throughout history. Dalio reveals the timeless and universal dynamics that were behind these shifts, while also offering practical principles for policymakers, business leaders, investors and others operating in this environment.

The Target Oriented Curriculum (TOC) is arguably the most comprehensive, fundamental and controversial attempt to promote systemic curriculum reform in Hong Kong. It aimed at a radical change in the nature of knowledge, pedagogy and assessment in schools. After an initial phase of confusion and criticism, this ambitious reform was revamped and vigorously promoted, but within a few years, it totally lost momentum as other educational issues attracted the attention of policy-makers. This book traces the career of TOC and studies the impact of the reform on the education system, subjects, schools and teachers. Drawing on a four-year multi-level research project, the chapters provide a deep understanding of the complex nature of educational reform and how a new curriculum is interpreted, developed and implemented. Besides providing a fascinating portrayal of the experiences of the TOC reform, this book offers lessons for future curriculum change in Hong Kong and elsewhere. 'This', writes Ivor Goodson in the Foreword, 'is curriculum research at its best.'

The forms by which a deceased person may be brought to rest are as many as there are causes of death. In most societies the disposal of the corpse is accompanied by some form of celebration or ritual which may range from a simple act of deploration in solitude to the engagement of large masses of people in laborious and creative festivities. In a funerary context the term ritual may be taken to represent a process that incorporates all the actions performed and thoughts expressed in connection with a dying and dead person, from the preparatory pre-death stages to the final deposition of the corpse and the post-mortem stages of grief and commemoration. The contributions presented here are focused not on the examination of different funerary practices, their function and meaning, but on the changes of

such rituals _ how and when they occurred and how they may be explained. Based on case studies from a range of geographical regions and from different prehistoric and historical periods, a range of key themes are examined concerning belief and ritual, body and deposition, place, performance and commemoration, exploring a complex web of practices.
