Global warming. Renewable energy. Hazardous waste. Air Pollution. These and other environmental topics are being discussed and debated more vigorously than ever. Colin Baird and Michael Cann's Environmental Chemistry is the only textbook that explores the chemical processes and properties underlying these crucial issues at an accessible, introductory level. With authoritative coverage that balances soil, water, and air chemistry, the new edition again focuses on the environmental impacts of chemical production and experimentation, offering additional "green chemistry" sections and new case studies, plus updated coverage of energy production (especially biofuels), the generation and disposal of CO2, and innovative ways to combat climate change.

Contains complete solutions for all in-chapter problems.

Designed to help students understand the material better and avoid common mistakes. Includes solutions and explanations to odd-numbered exercises.

Planet Earth : rocks, life, and history -- The Earth's atmosphere -- Global warming and climate change -- Chemistry of the troposphere -- Chemistry of the stratosphere -- Analysis of air and air pollutants -- Water resources -- Water pollution and water treatment -- Analysis of water and wastewater -- Fossil fuels : our major source of energy -- Nuclear power -- Energy sources for the future -- Inorganic metals in the environment -- Organic chemicals in the environment -- Insecticides, herbicides, and insect control -- Toxicology -- Asbestos -- The disposal of dangerous wastes.

Colin Baird's Environmental Chemistry presents the most balanced coverage of the environmental chemistry of natural systems on the market, and is the only text available to successfully target an audience with only general chemistry as a pre-requisite. With the addition of new co-author, Michael Cann from the University of Scranton, the new Third Edition becomes the first in the field to incorporate green chemistry into every chapter.
