The Dubai Declaration On Hyperglycemia in Pregnancy | Figo

The pivotal role of nutrition in pregnancy is well established and has important implications on subsequent maternal and offspring health, including outcomes in later adult life. Optimal nutrition periconception, if maintained throughout pregnancy, promotes optimal foetal growth and development. Growth trajectories in utero and size at birth are related to the offspring's risk of developing disease in later life, especially chronic non-communicable diseases such as hypertension, diabetes and ...

Nutrition in pregnancy - ScienceDirect

On Tuesday, the International Federation of Gynecology and Obstetrics (FIGO) announced its launch of guidelines aimed at improving maternal health, decreasing the incidence of maternal, fetal and neonatal morbidity and reducing the burden of non-communicable diseases globally. The comprehensive guidelines provide recommendations to improve the diagnosis and care of women with gestational diabetes mellitus (GDM) and to improve adolescent, preconception and maternal nutrition.

With GDM guidelines in place, it is time to act, WDF says ...

Focusing attention on GDM is a sustainable and cost effective way of reducing maternal and newborn morbidity and rising rates of obesity, diabetes and cardiovascular diseases; as well as, offering an opportunity for addressing two important components of the sustainable development goal 3 (maternal and newborn health and NCDs) with one comprehensive intervention.

Latin American & Caribbean Declaration On ... - Figo

FIGO (International Federation Gynaecology and Obstetrics) www.figo.org FIGO Statement 15 October 2018 pregnancy conditions, such as maternal obesity and gestational diabetes, are associated with similar risks in both the mother and her offspring.

FIGO Statement

Gestational diabetes mellitus (GDM) is hyperglycaemia first detected in pregnancy, short of overt diabetes in pregnancy (DIP). 1 While some females enter pregnancy with relative hyperglycaemia, worsening of glycaemic levels usually occurs in the third trimester following increased insulin resistance, secondary to changes in circulating hormones and cytokines that overcome the maximum insulin secretory capacity. 2 GDM-associated adverse pregnancy outcomes for the mother include pre-eclampsia ...

Continuing Challenges in the Medical Management of ...

In the region of Latin America and the Caribbean, direct causes of maternal death still prevail; however, a growing trend of maternal deaths is observed, like other parts of the world, due to medical conditions exacerbated by pregnancy (such as HIV, Malaria, Diabetes, Obesity, etc.) which at present means a level of more than 28% of total maternal deaths (indirect maternal mortality).
