MacArthur-Bates Communicative Development Inventories (CDI), Second Edition (Fenson, Marchman, Thal, Dale, Reznick & Bates, 2006). There are three different versions of the CDI, one for infants from 6 to 18 months, one for toddlers from 18 to 30 months, and one for children from 30 to 37 months. The infant form assesses receptive and expressive vocabulary as well as the use of communicative and symbolic gestures.

These NCS scannable Words & Sentences forms tap into parents' day-to-day knowledge about their children's language and communication skills between the ages of 16 and 30 months.

SAVE when you order this item as part of a set. This easy-to-read manual provides professionals with a thorough introduction to the Inventarios, the Spanish adaptation of the MacArthur Communicative Development Inventories (CDIs), standardized, parent-completed report forms designed by top language researchers to assess language and communication skills in young children ages 8-30 months. Along with an extensive overview of the two Inventario forms--Primeras Palabras y Gestos and Palabras y Enunciados--the manual includes detailed guidelines on using the forms, including information on administration, scoring, interpreting a child's score, and using the norms with older children, second-language learners, and children from families of low socioeconomic status clinical applications, such as screening for language delay, creating intervention strategies, and evaluating treatment effects research applications, such as matching children on language skills and examining the influence of other variables on language development technical data, including complete information on the development of the Inventarios, the norming data supporting them (including percentile tables and figures), and validity and reliability of the forms With this comprehensive guide, speech-language pathologists, child development specialists, and other professionals who work with young children and their families will use the Inventarios with confidence. Learn more about the CDIs and the Inventarios.

"Inventario I: Primeras Palabras y Gestos," sold in packages of 25 for easy re-ordering, is one of the two standardized, parent-completed report forms that make up the the Spanish adaptation of the "MacArthur Communicative Development Inventories (CDIs)," which was designed by top language researchers to assess language and communication skills in young children ages 8-30 months. With the "Inventarios," professionals can tap into parents' invaluable day-to-day knowledge about their children's language and communication skills--and respond to legislation that requires parental input in child evaluations. The forms focus on current behaviors and salient emergent behaviors that parents can recognize and track. Numerous studies document the reliability and validity, clinical utility, and research potential of the "CDIs" and "Inventarios." The "CDIs" were normed on approximately 1,800 children in three locations, and the "Inventarios" were normed on more than 2,000 children. The "CDI" and "Inventario" forms were developed separately to reflect the vocabulary and grammatical structure of each language. "Inventario I: Primeras Palabras y Gestos" is a "words and gestures" form for use with children ages 8-18 months. The first part of the form prompts parents to document the child's understanding of hundreds of early vocabulary items separated into semantic categories such as animal names, sound effects, and question words. Parents mark the words understood or used, and the form yields separate indexes of words understood and words produced. The second part of the form asks parents to record the communicative and symbolic gestures the child has tried or completed. This form generally takes 20-40 minutes to complete and 20-30 minutes to score by hand (it is also desktop scannable with the appropriate software). Also available are the "Inventario II: Palabras y

Enunciados" and the "User's Guide and Technical Manual." These forms are part of the "MacArthur-Bates Inventarios del Desarrollo de Habilidades Comunicativas (Inventarios)." The "Inventarios" and their English version, the "CDIs," are standardized, parent-completed report forms that track young children's language and communication skills. Top language researchers developed the report forms, designing them to focus on current behaviors and salient emergent behaviors that parents can recognize and track. This product is sold in a package of 20. Learn more about the CDIs and the Inventarios.

Bilingual language exposure is highly variable, with wide-ranging influences on early language skills. This underscores the need for understanding what to expect in early language acquisition so that those with typical language development can be differentiated from those who are struggling or at risk, and so requiring early intervention. One of the key ways to look at language development in very young children is to investigate their vocabulary development, and for bilingual children, this means measuring their abilities in both languages. This book takes an important step in this direction: it documents the expressive vocabularies of children aged 16-45 months who were exposed to different language pairs and bilingual contexts, and investigates the risk and protective effects of various environmental factors. In each of the six studies, the vocabularies of typically-developing children were measured using the vocabulary checklist of the MacArthur-Bates Communicative Development Inventories and its adaptations to other languages. Developmental and language background questionnaires provided additional information on children's developmental history, risk factors for language impairment, language exposure, as well as parental education and occupation. This harmonised methodology was designed within COST Action IS0804 (Language Impairment in a Multilingual Society: Linguistic Patterns and the Road to Assessment). The outcomes of this cross-linguistic research contribute towards answering theoretical questions regarding early bilingual vocabulary acquisition. They also have clinical relevance, potentially assisting speech-language pathologists and those interested in early language development in distinguishing between clinically significant bilingual delays and the natural consequences of bilingual exposure. This book was originally published as a special issue of the International Journal of Bilingual Education and Bilingualism.

Shows parents how to help their child communicate and learn language during everyday activities.
