In most of the other books, the science is reasonably correct, as it relates to balls. In Rocket Science for Babies, the science

involved is completely wrong.
Rockets do NOT use wings for lift,
especially not in space. I've had
to remove this book from reading
rotation since it's just plain
wrong.

Rocket Science for Babies (Baby University): Ferrie, Chris ...

This book couldn't decide if it was about aerospace or rocket science. It mentioned putting

wings on rockets traveling in space, which is inaccurate. The concepts of lift and drag do not make sense in space. I like the idea of introducing science to babies and young children, but it defetes the purpose if it is incorrect.
