Arthur O' Sullivan 's Urban Economics is the leading text for this small, but exciting market. This book covers urban economics as the discipline that lies at the intersection of geography and economics. The sixth edition is a thorough revision of previous incarnations—the author has reorganized and rewritten every chapter to produce a sleek and up-to-date text that will bring renewed attention to the Urban Economics course. This sixth edition offers an extreme makeover from previous editions while also incorporating the remarkable progress in the field of urban economics in the last ten to fifteen years. Part I of the book explains why cities exist and what causes them to grow or shrink. Part II examines the market forces that shape cities and the role of government in determining land-use patterns. Part III looks at the urban transportation system, exploring the pricing and design of public transit systems and the externalities associated with automobile use (congestion, environmental damage, collisions). Part IV uses a model of the rational criminal to explore the causes of urban crime and the spatial consequences. Part V explains the unique features of the housing market and examines the effects of government housing policies. The final part of the book explains the rationale for our fragmented system of local government and explores the responses of local governments to intergovernmental grants and the responses of taxpayers to local taxes. All of the economic concepts used in the book are covered in the typical intermediate microeconomics course, but a Tools of Microeconomics appendix is included that covers the key concepts for students whose exposure to microeconomics is limited to an introductory course or who could benefit from a review of intermediate concepts.

An excellent source of reference on the current practice of physical modelling in geotechnics and environmental engineering. Volume One concentrates on physical modelling facilities and experimental techniques, soil characterisation, slopes, dams, liquefaction, ground improvement and reinforcement, offshore foundations and anchors, and pipelines. V

In this book Georgios Kardaras offers a global view of the political and cultural contact between the Byzantine Empire and the Avar Khaganate, emphasizing in their reconstruction after 626 and the definition of the possible channels of communication.

Archaeologists and textile historians bring together 16 papers to investigate the production, trade and consumption of textiles in Scandinavia and across parts of northern and Mediterranean Europe throughout the medieval period. Archaeological evidence is used to demonstrate the existence or otherwise of international trade and to examine the physical characteristics of textiles and their distribution in order to understand who was producing, using and trading them and what they were being used for. Historical evidence, mainly textual, is employed to link textile names to places, numbers and prices and thus provide an appreciation of changing economics, patterns of distribution and the organisation of trade. Different types and qualities of cloths are discussed and the social implications of their production and import/export considered against a developing background of urbanism and increasing commercial wealth.
